

ATLAS BENCH

ATLAS MINI BENCH SYSTEM

A collaboration of Italian and Australian engineers has designed a system that is compatible to the Australian market, catering for our larger and therefore stronger vehicles. The system they have designed will increase profits and reduce repair cycles.

Two of the main design priorities are speed and ease of use. Addressing these issues have resulted in designing the complete repair station. The ease of the 8.5 ton pulling tower attachment and removal is effortless. The pulling angles, ease of chain set up with no S hooks required, multiple down pull angles, 360 degree pull. Make it the best pulling tower on the market second to none.

The sill clamp set up is fast, strong and undemanding with the worker standing for the whole set up time. A European clamp set is available, making it capable of pulling all European makes and models. The Atlas bench is the complete repair station.

- ✓ ADJUSTABLE SILL CLAMPS FOR RAPID SET UP TIME
- ✓ COMPATIBLE WITH ALL MEASURING SYSTEMS
- ✓ MORE PULLING ANGLES THAN ANY MINI BENCH ON THE MARKET
- ✓ NO STANDS REQUIRED FOR FAST PULL
- ✓ 8.5 TON PULL
- ✓ 1.6M LIFT
- ✓ MINIMUM HEIGHT 100MM ONLY
- ✓ 3M BED
- ✓ SUITABLE FOR ALL EUROPEAN VEHICLES
- ✓ MADE IN ITALY
- ✓ DOWN PULL STANDARD

ATLAS COLLISION REPAIR EQUIPMENT

Atlas Collision Repair Equipment has been established in Australia since 2000 and Italy since 1975. In this time Atlas Australia has been working closely with Italy, supplying the Australian market with products tailored to the needs and demands of the Australian smash repair industry.
